SWEET PEA GALAXY TANGERINE

13D. Exhibit D:

Came completely true in Burpee's California trials 1968, 1969, 1970, 1971, 1972 and 1973.

The Galaxy class is summer-flowering, was bred by Burpee and is quite distinct. In vigor Galaxy approximately matches the spring-flowering Royal class, but Galaxy is later-flowering and the flowers are much more ruffled. Galaxy is much more vigorous, larger-flowered and longer stemmed than the Late Spencer class it supercedes in all important characteristics except flower placement - flower placement being important only to the specialized exhibitor in flower show classes. Flowering period approximately coincides with that of the Late Spencers. When well grown, Galaxy regularly produces many more than 5 flowers on each stem, compared with 3 or 4 flowers on Late Spencers, and the stems are much longer, thicker and stronger than the stems of the Late Spencer class. Like the Late Spencer class, Galaxy is climbing and self clinging. Being vigorous and prolific, Galaxy is ideal for garden decoration and as a cut flower.

Tangerine matches the other Galaxy varieties in all important characteristics except that the flowers are slightly less ruffled than average. Flower color is a rich orange-red, opening a little more cerise, and is quite distinct from any other Galaxy variety. Flower color resembles Late Spencer Mollie. On the RHS Color Chart 1966 the standard and wing are nearest to Red Group 44A. The keel is cream with a reddish rose flush.
